Chapter1 : Survey of Chemical Substances Contained in Parts and Materials

1. Purpose

Sakai Display Products Corporation (hereinafter referred to as "SDP") promotes green procurement from suppliers who are constructively engaged in environmental preservation activities to ensure user safety and to protect the environment at the time a product is finally disposed of.

Green procurement at SDP encompasses two aspects: an "Environmental Management Evaluation" that evaluates efforts aimed at protecting the environment by the supplier's organization as a whole, and a "Delivered Goods Evaluation" to assess the reduction in environmental impact of parts and materials purchased from the supplier (including materials, general components, finished and semi-finished products, and indirect materials). The objectives of this standard manual is not only to confirm legal compliance but also to contribute to reduction in environmental impact and to ensure safety of users by disclosing to our supplier's organizations the criteria and the survey methods for chemical substances contained in products mentioned in the "Delivered Goods Evaluation".

The Delivered Goods Evaluation consists of two processes: a Report on Chemical Substances Contained in the Product and a Content Survey.

Survey	Description	Remarks
Report on Chemical Substances Contained in the Product	A prescribed document attached to delivery specifications and submitted to SDP that indicates whether substances banned by SDP are contained in delivered goods.	Posted on the SDP Green Procurement website https://www.sdp.co.jp/en/suppliers/green.html
Parts Environment Survey Sheet (Content Survey)	A prescribed document to report chemical substances mass and result of the RoHS analysis report	Posted on the SDP Green Procurement website https://www.sdp.co.jp/en/suppliers/green.html

2. Applicable Scope ^{*1}

This survey applies to all parts and materials purchased new by SDP. Specifically, it applies to the following items.

- (1) Parts, materials, units incorporated in the product
- (2) Indirect materials used in production and incorporated into the product
(solder, oil, grease, tape, marking ink [marker pens], etc.)
- (3) Finished products purchased for sale, optional equipment, supplies, etc.
- (4) Printed matter and accessories (user manuals, cables, remote control units, etc.) enclosed with the product
- (5) Packaging materials enclosing or holding the product

The following parts and materials may contain chemical substances that are subject to this survey. Check thoroughly whether they are present.

- Lubricants, such as grease
- Flame retardants in resin materials
- Polyvinyl chloride, flame retardants, and stabilizers in lead wire insulation
- Special metals (alloys) for lubrication of electrical contacts, etc.
- Additives (plasticizers) in rubber for belts, rollers, bushings, tubing, etc.
- Marking paints for color codes, pigments, etc.

*1 For indirect materials in (2) above and for packaging materials in (5) above, the applicable scope for the Report on Chemical Substances Contained in the Product differs from that of the Content Survey.

For details, refer to the "Remarks" column under section "6. (1) List of Documents to Be Submitted".

3. Definition of Terms

Chemical substance	An element or its compound that is formed naturally or can be obtained in any manufacturing process. (JIS Z 7201: 2012)
Mixture	Mixture can be obtained by mixing two or more chemical substances. (JIS Z 7201: 2012) [Note] Examples of mixtures include paint/coating agent, ink, alloy ingot, solder, resin pellet, etc.
Article	Refers to an item with a specific shape, appearance or design that is given during production which substantially determines the functions of the item in final use rather than its chemical composition. (JIS Z 7201: 2012) [Note] Examples of articles include paints, metal plates, gear wheels, integrated circuits, electrical products, transport machineries, etc.
contain	Refers to a state where a chemical substance is contained in products, parts, materials, and ingredients used in them. Regardless of intentional addition or non-intentional addition (including impurities, residuals/adhesion/contamination, etc. created in the process of manufacturing and transport), it is regarded as "contained" if the content rate of the chemical substance exceeds the SDP's reference value (threshold).
Intentional addition	Refers to addition performed in the aim of providing a specific property to parts and materials. For example, hexavalent chromium for rust-proofing, brominated flame retardants to improve fire retardancy of plastic cabinets, etc. are applicable.
Impurities	Refers to materials that are contained in natural materials and cannot technically be removed in the refining process, materials that are created in the synthesis reaction process and cannot technically be removed, and materials that are unintentionally contained in recycled materials.
Homogeneous material	Refers to one material of uniform composition throughout or a material, consisting of a combination of materials, that cannot be disjointed or separated into different materials by mechanical actions such as unscrewing, cutting, crushing, grinding and abrasive processes.
Delivery Prohibition Date	Refers to the day on which delivery to SDP is prohibited •Immediately ... immediately prohibition of use •(Designated date: Day_ Month_ Year_) Delivery after the designated date is prohibited. •Under deliberation ... Under deliberation by related organizations
RoHS RoHS Directive	Refers to EU RoHS Directives 2011/65/EU and the related amended Directive.

4. Chemical Substance Management Categories

As shown in the table below, chemical substances contained in the parts and materials purchased by SDP are managed by classifying them into (1) Banned substances, (2) Substances banned depending on the application, (3) Candidate substances to be banned and (4) Managed substances.

Chemical substance category	Explanation	Remarks
(1)Banned substances	Substances that cannot be used for any purpose. If contained in a part or material, immediately discontinue and eliminate their use. In principle, SDP will not purchase parts and materials containing these substances.	<ul style="list-style-type: none"> Substances whose inclusion in products is currently regulated or is expected to be regulated in the future under laws and regulations and on environmental labels in Japan or overseas.
(2)Substances banned depending on the application	Substances regarded as banned by SDP depending on the application (excluded applications). In excluded applications,these substances shall be treated as Managed substances.	<ul style="list-style-type: none"> Substances that SDP regulates on itsown initiative in advance of global trends because it is widely known that their environmental impact is high and alternative substances exist.
(3)Candidate substances to be banned	Substances that are candidates for "Banned substances" in (1) or (2) above. If it is contained,please promote substitution.	<ul style="list-style-type: none"> Substances that are expected to be banned in the near future under domestic and foreign laws and regulations. Since the threshold value, prohibited date, regulated use (excluded use), etc. have not been determined in the laws and regulations, it cannot be specified as SDP's "Candidate substances to be banned" at this time, but in the future based on the trends of laws and regulations, etc. Specify for SDP's "Candidate substances to be banned". Depending on the timing when laws and regulations are finalized, it may not be possible to set a grace period from the designation as SDP's "Banned substances" to the delivery prohibition date, so if it is contained, please proceed with the substitution as soon as possible.
(4)Managed substances	Substances for which it is necessary to ascertain whether the specified substance is present, the amount contained, and so on.	<ul style="list-style-type: none"> Substances for which disclosure of information on their usage status in products is required, or is expected to be required in the future, under laws and regulations and on environmental labels in Japan or overseas. Substances for which customers have requested, or for which there is a possibility of being requested, that their usage status information in products be disclosed. All SDP-specific survey-targeted chemical substances that do not fall under the category of "SDP-banned substances "shall be treated as Managed substances.

5. Classification of Items Procured

(2) Substances Banned Depending on the Application

As for the chemical substances covered under EU RoHS, the delivery prohibition date has been set in accordance with the following policy:

<The SDP's policy of delivery dates to SDP and EU RoHS exemption's due date. >

1) In principle, SDP set up delivery prohibition date to SDP as "six month" before the due date of EU RoHS exemption.
 Example) If the deadline of RoHS Exemption is "21 July 2021," the delivery prohibition date to SDP is "21 Jan. 2021".

2) In addition, if the deadline of RoHS Exemption is changed, in principle, the delivery prohibition date to SDP will be six months before the changed deadline.

3) It is based on information on the exemption deadline of the EU RoHS Directive at the time of issuance of this manual.
